FOREWORD

In presenting to the medical profession this bibliography prepared for us by the American Institute of Medicine, we feel that we are repaying in part for the innumerable courtesies and kind assistance given us by so many physicians all over the world. The work is a complete one and will, we trust, be of service to users of radium who seek a ready reference to the world's writings on this very important phase of therapeutics.

UNITED STATES RADIUM CORPORATION.

FOREWORD

In preparing this bibliography it is with the intention of placing in the hands of the individual physician a list of all articles on Radium and its Uses, Results, Dangers, Apparatus for its application, that have been published in the medical press, from its discovery by Mme. Curie, up to January 1st, 1922.

We have aimed, in our classification, to segregate every reference, as nearly as possible, as it applies to specific conditions.
